

Price: Call
Length: 35 Hours (5 days)

Introduction: This 5-day instructor led course provides students with the technical skills required to write basic Transact-SQL queries for Microsoft SQL Server 2014. This course is the foundation for all SQL Server-related disciplines; namely, Database Administration, Database Development and Business Intelligence. This course helps people prepare for exam 70-461. This course is designed for customers who are interested in learning SQL Server 2012 or SQL Server 2014. It covers the new features in SQL Server 2014, but also the important capabilities across the SQL Server data platform.

Target Audience: This course is intended for Database Administrators, Database Developers, and Business Intelligence professionals. The course will very likely be well attended by SQL power users who aren't necessarily database-focused or plan on taking the exam; namely, report writers, business analysts and client application developers.

Prerequisites:

- Working knowledge of relational databases.
- Basic knowledge of the Microsoft Windows operating system and its core functionality.

Objectives:

At the end of the course, students will be able to:

- Describe the basic architecture and concepts of Microsoft SQL Server 2014.
- Understand the similarities and differences between Transact-SQL and other computer languages.
- Write SELECT queries
- Query multiple tables
- Sort and filter data
- Describe the use of data types in SQL Server
- Modify data using Transact-SQL
- Use built-in functions
- Group and aggregate data
- Use subqueries
- Use table expressions
- Use set operators
- Use window ranking, offset and aggregate functions
- Implement pivoting and grouping sets
- Execute stored procedures
- Program with T-SQL
- Implement error handling
- Implement transactions

Course Outline

I. Introduction to Microsoft SQL Server 2014

- A. The Basic Architecture of SQL Server
- B. SQL Server Editions and Versions
- C. Getting Started with SQL Server Management Studio

II. Introduction to T-SQL Querying

- A. Introducing T-SQL
- B. Understanding Sets
- C. Understanding Predicate Logic
- D. Understanding the Logical Order of Operations in SELECT statements

III. Writing SELECT Queries

- A. Writing Simple SELECT Statements
- B. Eliminating Duplicates with DISTINCT
- C. Using Column and Table Aliases
- D. Writing Simple CASE Expressions

IV. Querying Multiple Tables

- A. Understanding Joins
- B. Querying with Inner Joins
- C. Querying with Outer Joins
- D. Querying with Cross Joins and Self Joins

V. Sorting and Filtering Data

- A. Sorting Data
- B. Filtering Data with a WHERE Clause
- C. Filtering with the TOP and OFFSET-FETCH Options
- D. Working with Unknown and Missing Values

VI. Working with SQL Server 2014 Data Types

- A. Introducing SQL Server 2014 Data Types
- B. Working with Character Data
- C. Working with Date and Time Data

VII. Using DML to Modify Data

- A. Inserting Data
- B. Modifying and Deleting Data

VIII. Using Built-In Functions

- A. Writing Queries with Built-In Functions
- B. Using Conversion Functions
- C. Using Logical Functions
- D. Using Functions to Work with NULL

IX. Grouping and Aggregating Data

- A. Using Aggregate Functions
- B. Using the GROUP BY Clause
- C. Filtering Groups with HAVING

X. Using Subqueries

- A. Writing Self-Contained Subqueries
- B. Writing Correlated Subqueries
- C. Using the EXISTS Predicate with Subqueries

XI. Using Table Expressions

- A. Using Derived Tables
- B. Using Common Table Expressions
- C. Using Views
- D. Using Inline Table-Valued Functions

XII. Using Set Operators

- A. Writing Queries with the UNION Operator
- B. Using EXCEPT and INTERSECT
- C. Using APPLY

XIII. Using Window Ranking, Offset and Aggregate Functions

- A. Creating Windows with OVER
- B. Exploring Window Functions

XIV. Pivoting and Grouping Sets

- A. Writing Queries with PIVOT and UNPIVOT
- B. Working with Grouping Sets

XV. Executing Stored Procedures

- A. Querying Data with Stored Procedures
- B. Passing Parameters to Stored Procedures
- C. Creating Simple Stored Procedures
- D. Working with Dynamic SQL

XVI. Programming with T-SQL

- A. T-SQL Programming Elements
- B. Controlling Program Flow

XVII. Implementing Error Handling

- A. Using TRY/CATCH Blocks
- B. Working with Error Information

XVIII. Implementing Transactions

- A. Transactions and the Database Engine
- B. Controlling Transactions
- C. Isolation Levels

XIX. Improving Query Performance

- A. Factors in Query Performance
- B. Displaying Query Performance Data

XX. Querying SQL Server Metadata

- A. Querying System Catalog Views and Functions
- B. Executing System Stored Procedures
- C. Querying Dynamic Management Objects
